

LeCardo

LeCardo is a simple card game. Unlike most word games, players do not have a bunch of letters from which they make words. Instead, they have a collection of words from which they make compound words and phrases. Each word is worth points and the most points will win the game.

However, the game is worth playing just for fun, rather than for points. The question is, what will other players let you get away with? Bad puns are just the start!

The whole thing is enhanced by the attractive line drawings that illustrate the cards.
